

THE 4/24/18 VERSION OF SOFTWARE HAS THE FOLLOWING NEW FEATURES & UPDATES:

- 1) Sometimes, vendors created on the POS were not always reflected on the app and the merchant portal. Now, even those with no phone numbers are properly included.
- 2) Now you can track inventory when scanning a brand new item from the register.
- 3) EBT flag and fee multiplier now work for department one-click items:

- 4) When ordering paper refills, you can now make your purchase online:

The left screenshot shows a POS terminal interface with a red circle around the "Superchat" button in the top navigation bar. The right screenshot shows the NPS Marketplace website with a product page for "Receipt Paper Rolls" featuring three white paper rolls and a "Buy Now" button.

- 5) If a POS displays the warnings below, it means that it is not correctly connected to the internet -or- the internet has low speed -or- there is restricted service by the internet provider. Click "NET TEST" to help determine what the problem could be, or "RETRY" to try again. Clicking "OK" will dismiss the notice, but will not stop the lack of internet access from eventually shutting off the machine.
