

THE 6/1/18 VERSION OF SOFTWARE HAS THE FOLLOWING NEW FEATURES & UPDATES:

- 1) The UPC entry process has been upgraded. On the register screen's numeric keypad, when entering a UPC with a leading zero, the code will show up immediately (instead of after entering six other digits) and you will no longer see a dollar sign when entering a UPC starting with zero.
- 2) A new setup switch controls alphabetical listing of INSTORE items on the register. To access this setting, go to TOOLS, select STORE SETUP, and click YES on the SORT INSTORE ITEM ALPHABETICALLY switch on bottom right (see image below). Don't forget to click UPDATE.

The screenshot shows the 'Store Configuration' interface with the 'Basic Info' tab selected. The interface includes fields for Name, Address, City, Zip, State, Phone, Mobile, and Fax. It also has dropdown menus for Timezone and State, and toggle switches for various settings. The 'Sort InStore Item Alphabetically' toggle switch is circled in red, indicating it is the focus of the update. The 'Update' button is at the bottom.

Setting	Value
Name	Yaakov Macbook
Address	1451 route 88
City	Brick
Zip	08724
State	New Jersey
Phone	(973) 424-2222
Mobile	(973) 424-9999
Fax	(973) 438-1111
Timezone	America/New_York

- 3) Loading of receipt history is now significantly faster than ever before.
- 4) Inventory operations work better now with some slower networks.
- 5) Fax number can now be printed on receipt, if entered on setup screen.
- 7) We have corrected some slow-starting systems to reduce/eliminate occurrences of "white screen".
- 8) Fixed basket counts to include baskets with no items, such as Lotto Payout Only transactions.
